

## *Certificate of Completion*

THIS CERTIFIES THAT  
**CALEB FELLOWES**

has participated in the following education session:

### **Carbapenemase-producing Enterobacteriaceae (CPE) Acute Care Recommendations**

Presenter The Nursing CPD Institute

In this session you will:

- Gain an understanding of incidence of carbapenemase-producing Enterobacteriaceae (CPE) in Australia
- Learn the recommendations for the screening and tracking of CPE
- Receive information to support your Nursing Practice of caring for those with CPE
- Gain knowledge of strategies to reduce CPE transmission

Completed on

**01 April 2019 (duration of 2 hour/s)**

**This equates to 2 CPD Hour/s (Continuing Professional Development)**

#### REFLECTION:

Gram-negative bacteria have now emerged that are resistant to most types of antibiotics, including a key “last resort” class of antibiotic, the carbapenems. These organisms are referred to as carbapenem resistant Enterobacteriaceae (CRE). Multi-resistant Gram-Negative bacteria, such as CRE, place Australian patients at greater risk of potentially untreatable infection and increased mortality. Carbapenem resistant Enterobacteriaceae is of particular concern because Enterobacteriaceae cause infections at a high frequency and resistant infections are associated with high mortality. The Australian Commission on Safety and Quality in Health Care guide is the basis for this session.
